PROBLEM

Problem yeh hai ki hum unhi boxes me dusara
jaray hai yaha ek bat ja chukay hai!
Toh humko kuch essa chaiye:

↳ same box me dusara nahi jana!
jisme ek baar jachuke hain!

SOLUTION

= Hum ek boolean Array create krengy!
jiska naam visited

↳ kitna bada hogा? →

utna hi bada
kitna bada humara
maze array hai!

∴ By Default boolean
Array me [false] hogा!

Jab bhi ki cell / box me ayengy toh sabse phele uss box / cell ko visited mark krenge! Aur kisi bhi cell me, (2nd) time nahi jayengy!

2nd TRY

= Iss stage pe hum path ke end tak poch gaye ki humne forward nahi ja sakte
 \therefore we will retreat the path

\hookrightarrow jiska jiska (tedr) ho jayega vo stack se pop out hoga

= \therefore For retreating, a level of stack keeps popping as we return to the previous level in the stack becoz test case failed.

= As we keep on doing it, we reach the position of cell $(2, 4) \leftarrow$ $\begin{cases} \textcircled{t} \\ \textcircled{e} \end{cases}$ marked visited

\therefore No path goes through it.

Problem

we will face problems
↓

Jab hum wapis/
~~retreat~~ krenge tab
↓

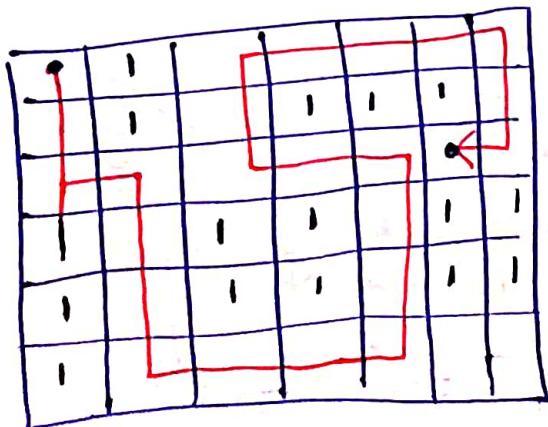

kuki visited
mask laga hua
hai

↓
new path nahi
nikal payengy

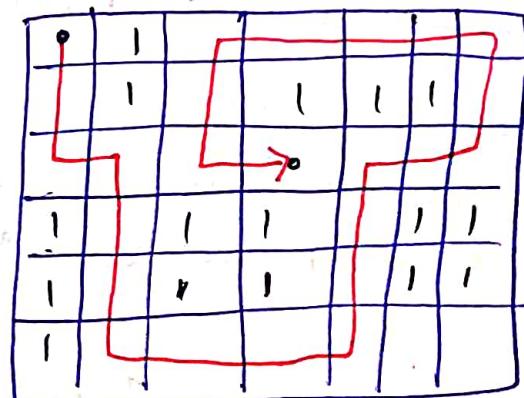

Solution

Hume recursion se wapis
aati waqt visited ko
udana hai

↓
Ku? → hum new paths ko travel
krpayengy!

①

②

3RD TRY

```

    p s v m (s [ ] a ) {
        }
    p s v floodfill ( — , — , — , — , — , — ) {
        if ( — || — || — || — || — || — ) {
            }
        if ( — & k — ) {
            }
        visited [row] [col] = true;
    }
    visited [row] [col] = false; *
}

```

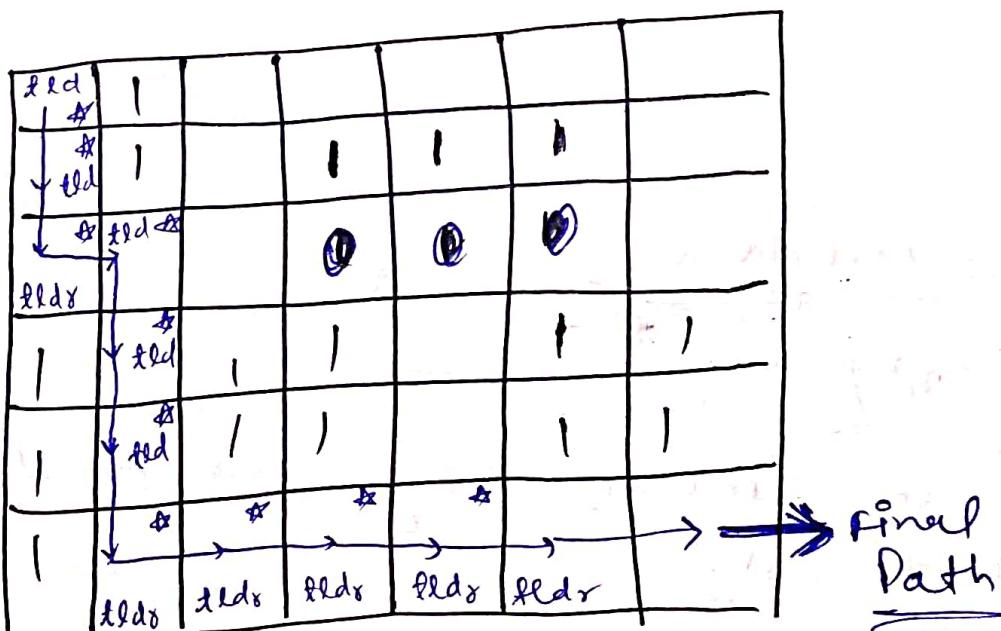

= since after all recursion calls have run completely and returned.

= we mark that cell as false again
 \therefore we are free to move on that cell if we want to

= Now, we repeat, the tick/mark is also removed.
 see ① and ②

In 2nd try we follow the ① and after the path retreating and once again marked the visited cells as unvisited, we looked for new path and followed ②.

Hence, we again retreat,

Hence : First Path : dd & ddd&&&rrr

= Again, we start wiping out the cells untill we reach this stage:

start	1					
visited	1		1	1	1	
visited		1	0	0	0	
start	1	1	1		1	1
1	1	1		1	1	
1						

= Again, the cells are visited and unvisited multiple times untill we find a new path.

Time Complexity

$$O(4 * n^2) \longrightarrow \underline{\underline{O(n^2)}}$$

Because,
EK cell matrix ka (4) bar chalega

→ top
→ left
→ down
→ right

Space complexity

$$\underline{\underline{O(n^2)}}$$

Since an extra 2D array used for storing "visited" cell.

Space complexity is Quadratic.

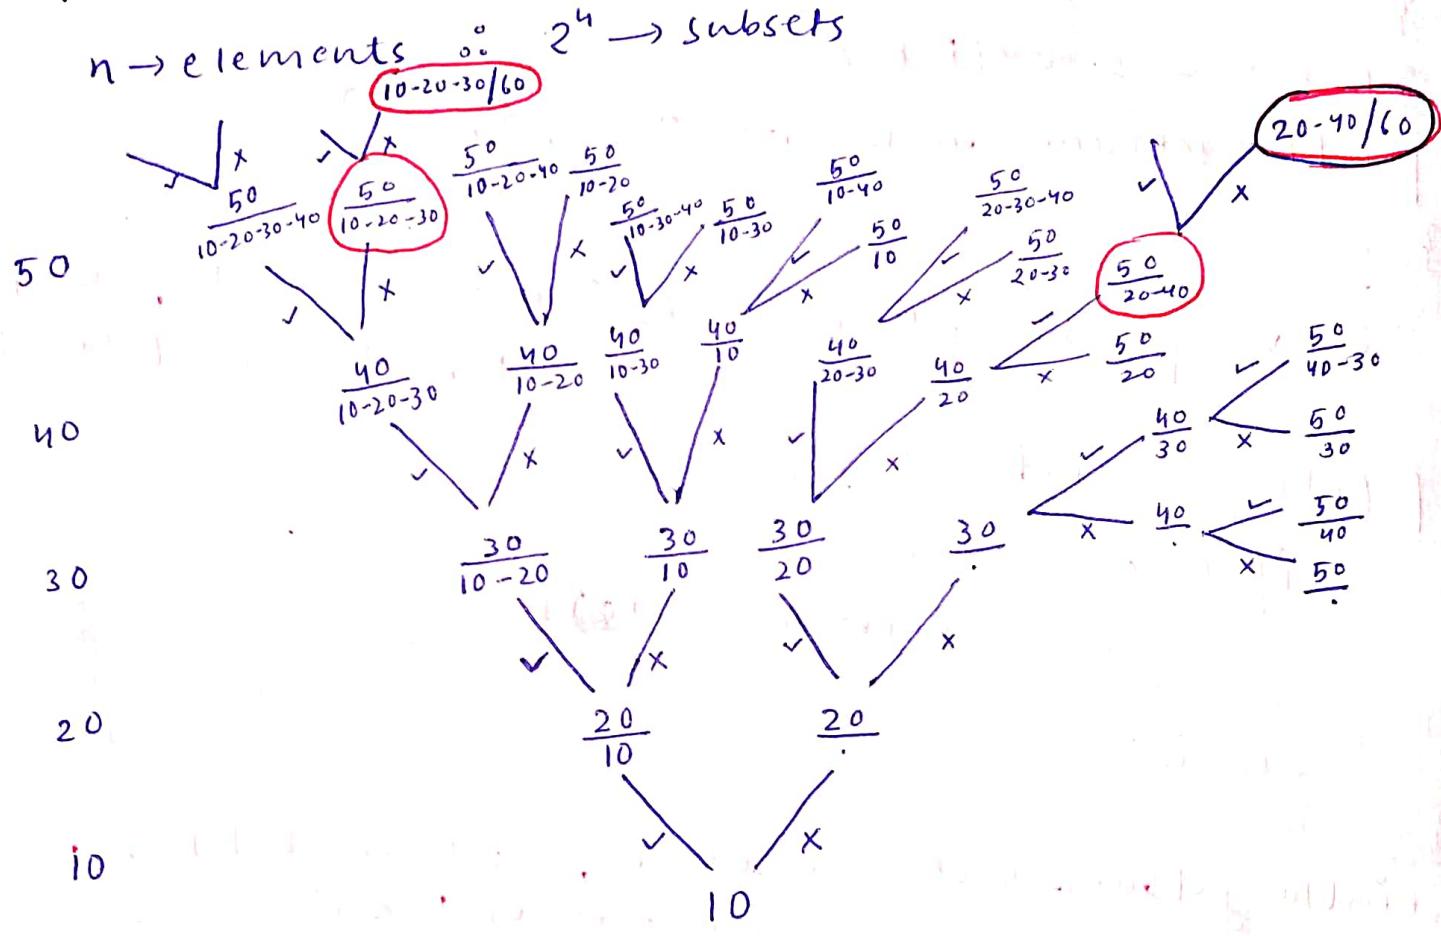

Target Sum Subset

- Humko array mila hai

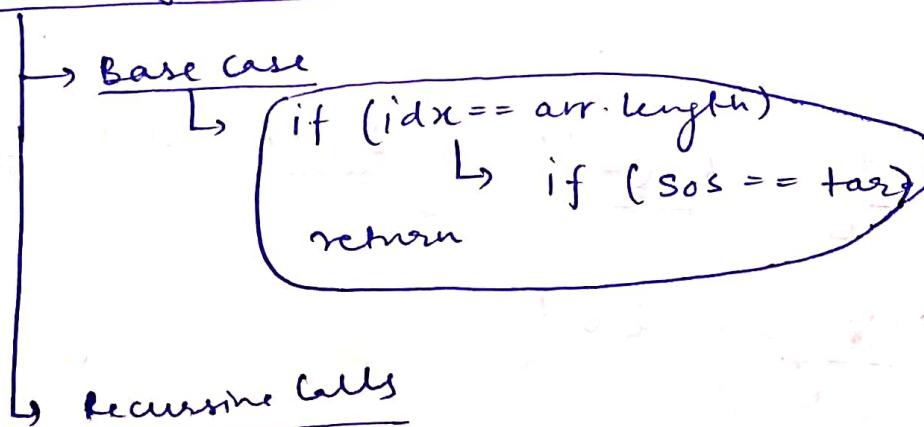

Target = 60

[10 | 20 | 30 | 40 | 50]

- Hume saare subset print krne hai jiska sum 60 ke equal hai

printTargetSumSubsets function

Recursive calls

→ choice 1

→ choice 2

```

    p s v m (s [] a) {
        Scanner s = new Scanner (System.in);
        int n = s.nextInt();
        int [] arr = new int [n];
        for (int i=0; i < arr.length; i++) {
            arr[i] = s.nextInt();
        }
        int tar = s.nextInt();
        printTargetSumSubsets (arr, 0, "", 0, tar);
    }

    p s v printTargetSumSubsets (int [] arr, int idx, string
                                  set, int sos, int tar) {
        if (idx == arr.length) {
            if (sos == tar) {
                System.out.println (set + ".");
            }
            return;
        }
        printTargetSumSubsets (arr, idx+1, set + arr[idx] + ",",
                               sos + arr[idx], tar);
        printTargetSumSubsets (arr, idx+1, set, sos, tar);
    }

```

Time Complexity: $\underline{O(2^n)}$ → 2 recursive calls

Space Complexity: $O(1)$

N-Queens

- = nxn ka chess board diya hai! (Input Θ)
- = Iss size ke chess board me n no. of queens ko place krna hai!
- = Such that no queen kill another queen.

	0	1	2	3
0	*			
1				*
2	*			
3		*		

Time Complexity : $O(n!)$

How? ↓

Assume,
Run-time for n rows = $T(n)$
 $(n-1)$ rows $\rightarrow T(n-1)$

Since we are making at
max n calls,

$$T(n) = n \times T(n-1)$$

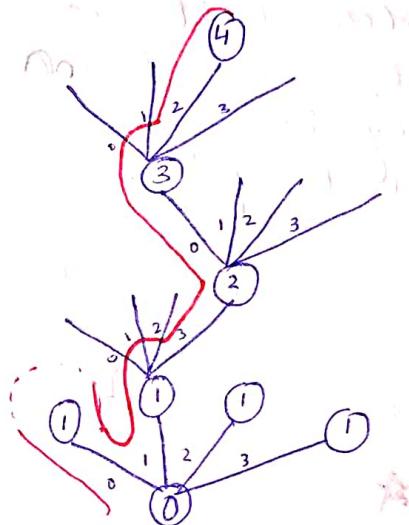

$$\because T(n-1) = (n-1) \times T(n-2) [n+1] \times n$$

$$[T(n-2) = (n-2) \times T(n-3) + 2] \times n(n-1)$$

$$[T(1) = 1 \times T(0) + (n-1)] \cdot \underbrace{\{n(n-1)(n-2)\}}_{\dots}$$

$$\therefore T(n) = \{n(n-1) \dots 1\} + \{n(n-1)(n-2) \\ + (n(n-1)(n-2)) \dots (n(n-1) \dots 1)\}$$

$$T(n) = n! T(0) + \left\{ \frac{n!}{1} + \frac{n!}{1 \cdot 2} + \frac{n!}{1 \cdot 2 \cdot 3} + \dots \frac{n!}{1 \cdot 2 \cdot 3 \dots n} \right\}$$

$$T(n) = n! \left\{ 1 + \frac{1}{1!} + \frac{1}{2!} + \frac{1}{3!} + \dots + \frac{1}{n!} \right\}$$

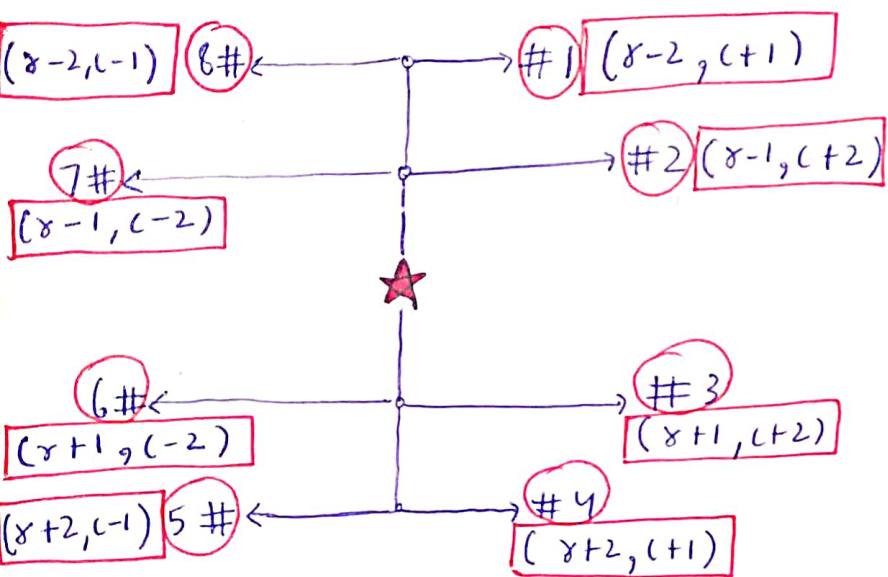

$$T(n) = n!$$

Ignoring this as
 $n \rightarrow \infty$,
 $\frac{1}{n!} \rightarrow 0$

Space Complexity
 $: O(1)$

Knights Tour

- Hume ek chess board mila hai
- Hume ek box ya cell denge!
- Iss cell se knight apne moves chalega!
- Hume K ko move karna hai
- Iss trah se move karna hai ki K issi ke ander chalta rahey aur 25 (Total) saare boxe K ko visit krdey bina kisi box ke 2 baar visit krey!
